KANAV BANSAL

JINJA TEMPLATING:

Templates are files that contain static data as well as placeholders for dynamic data.

A template is rendered with specific data to

Produce a final document. Flask uses the

Jinja template library to render templates.

In Flask, Jinja is configured to autoescape

any data that is rendered in HTML template.

↳ It will let us directly to insert the variables from python code to html file.

SYNTAX: `{{ variable_name }}`

↳ We also have access to control flow syntax

in our template such as for loops and or

if statements.

SYNTAX: for loop:

125

{ % for item in sequence % }

BODY OF
FOR
LOOP

{ % endfor % }

if statement:

{ % if xyz in sequence % }

BODY OF
IF
STATEMENT

{ % else % }

BODY OF
ELSE
STATEMENT

{ % endif % }
